

① 次の図形の x を求めましょう。

①

$$6 \times x = 30$$

$$x = 5 \text{ cm}$$

②

$$8 \times x \div 2 = 12$$

$$4 \times x = 12$$

$$x = 3 \text{ cm}$$

③

$$7 \times x = 35$$

$$x = 5 \text{ cm}$$

④

$$(2 + 8) \times x \div 2 = 20$$

$$5 \times x = 20$$

$$x = 4 \text{ cm}$$

⑤

$$x \times x \times 3.14 = 314$$

$$x \times x = 314 \div 3.14$$

$$x = 10 \text{ cm}$$

② ㉞、㉟の角度を求めましょう。

$$180 - 40 = 140$$

$$140 \div 2 = 70$$

$$180 - 70 = 110^\circ$$

$$360 - (70 + 130 + 80) = 80^\circ$$

③ 右の三角柱の体積を求めましょう。

$$(2 \times 4 \div 2) \times 5 = 20 \quad 20\text{cm}^3$$
